

# Meteosat Third Generation (MTG): Overview, impacts, timeline for transition

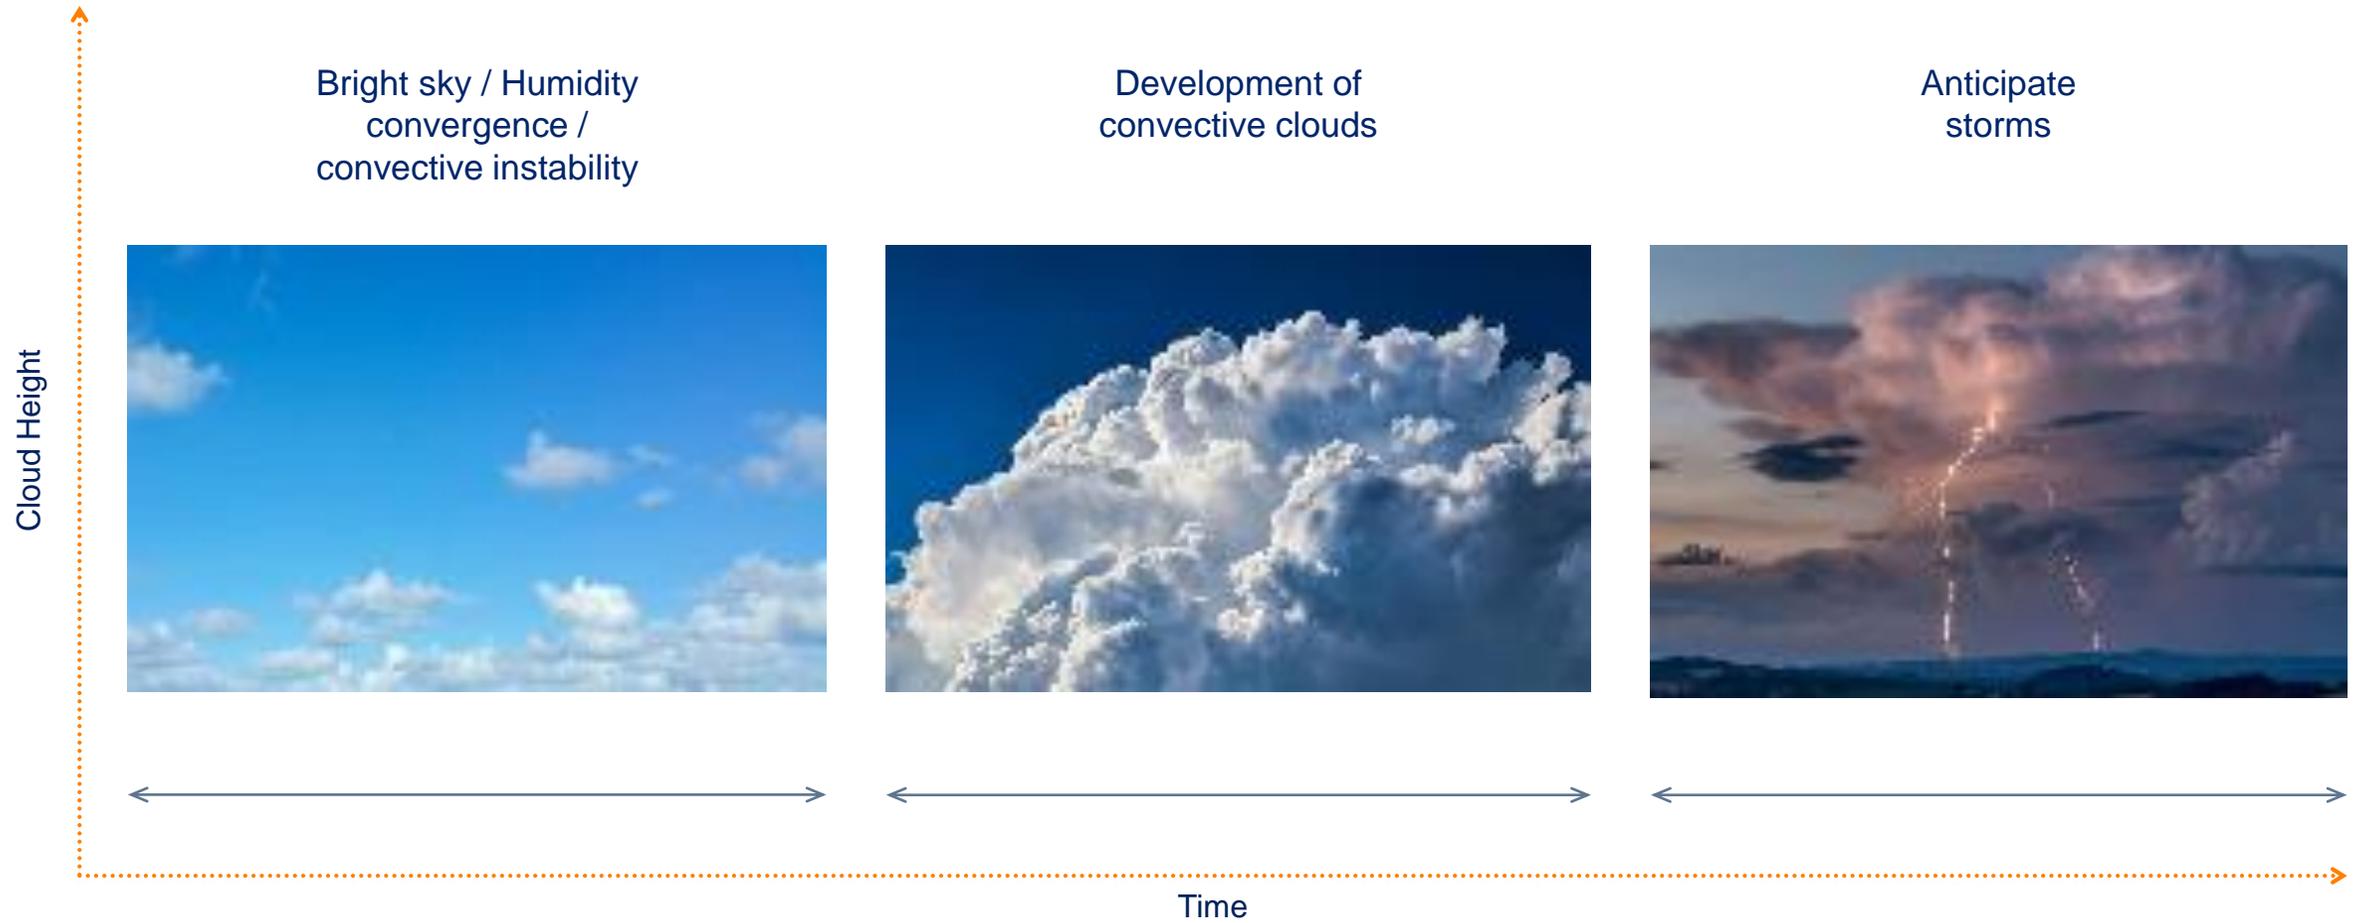

April 2021

# MTG enhances current capability for nowcasting of severe weather

# MTG – Contribution to predicting high-impact weather

# Meteosat Third Generation: Imaging mission (MTG-I)

- Imagery mission implemented by two MTG-I satellites
- Full disc imagery every 10 minutes in 16 bands (→MTG-I1)
- Fast imagery of Europe every 2.5 minutes (MTG-I2)
- New Lightning Imager (LI)
- **Start of operations in 2023**
- **Operational exploitation: 2023-2042**

# Meteosat Third Generation: Sounding mission (MTG-S)

- Hyperspectral infrared sounding mission (InfraRed Sounder – IRS)
  - 3D weather cube: temperature, water vapour, O<sub>3</sub>, every 30 minutes over Europe
- Air quality monitoring and atmospheric chemistry in synergy with Copernicus Sentinel-4 instrument (UVN)
- **Start of operations in 2024**
- **Operational exploitation: 2024-2043**

# '4D Weather Cube': Probing the atmosphere to detect severe weather

**Every 30 min  
over Europe  
and North  
Africa**

**Enabled by  
MTG**

# Visualising the “4D Weather Cube”

08:00 CEST

Based on 20 June 2013 data  
(convective day over Central Europe):

- DWD model output T/q Central European domain centered over Germany
- 2D Winds (AMV BUFR operational product)
- Sandwich product, based on SEVIRI
- Lightning, based on surface-based lightning detection data

# Transition from MSG to MTG

Satellite	Orbital position	Launch	Start of Services	Capability of the MTG Services deployed
MTG-I1	0°	End 2022	1 year after launch	Initial Operational Capability (IOC)
MTG-S1	0°	End 2023	1 year after launch	Partial Operational Capability (POC)
MTG-I2	9.5°	2025	Six months after launch	Full Operational Capability (FOC)

Capability	Partial Operational Capability (POC)	Full Operational Capability (FOC)
Meteosat-10	MTG-I1 (back-up Meteosat-10 FES)	MTG-I1 (back-up MTG-I2)
Lightning Imager Service (LI)	MTG-I1 (no backup)	MTG-I1 (back-up MTG-I2)

**Status: April 2021**

# Indian Ocean Data Coverage

- Meteosat-8 SEVIRI at 41.5°E since 2016, reaching end of lifetime
- Meteosat-9 SEVIRI to move to 45.5°E position in Feb-Apr 2022
- Two months of parallel operations of Met-8 and Met-9, to support user transition
- Meteosat-9 to take over as IODC prime as of 1 July 2022

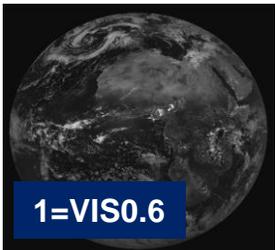

# MTG Spectral imaging mission: Main improvements

- Better spectral resolution:
  - from 11/12 to 16 channels
- More frequent:
  - 10 min vs 15 min
  - 2.5 min vs 5 min
- Increased radiometric resolution:
  - 12 bit vs 10 bit
- Better spatial resolution

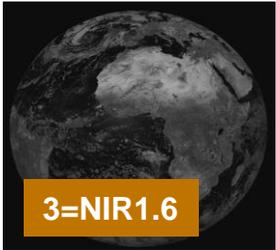

**FCI full-disc scanning pattern  
(over 10 minutes)**

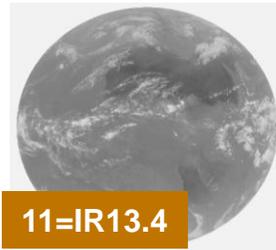

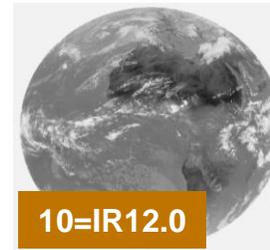

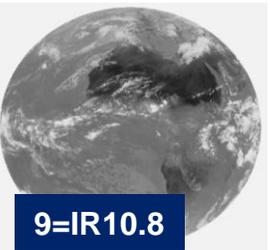

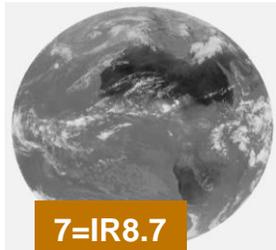

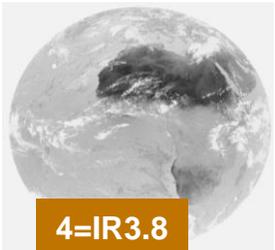

# Current and future imagers channels: MSG SEVIRI and MTG FCI

SSD: 1km

SSD: 3km

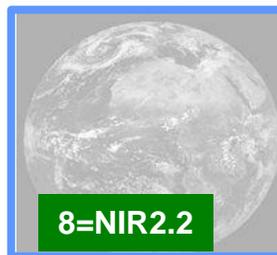

**Current SEVIRI**

# Current and future imagers channels: MSG SEVIRI and MTG FCI

# MTG Lightning imaging mission

- Lightning is a precursor of severe weather, with a lead time of tens of minutes
- Most ground-based lightning location systems are mainly sensitive to cloud-to-ground lightning (CG)
- Often, no increase in CG due to “weather intensification” observable  
→ Total lightning is the parameter of interest

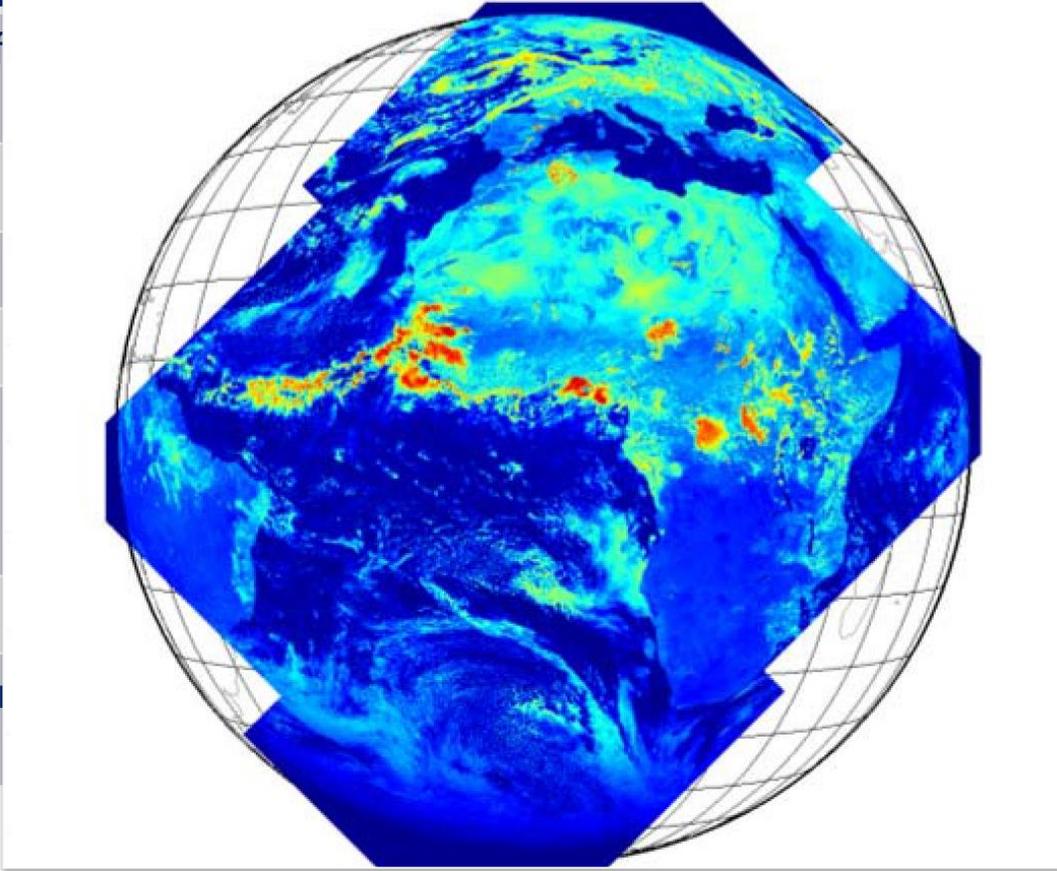

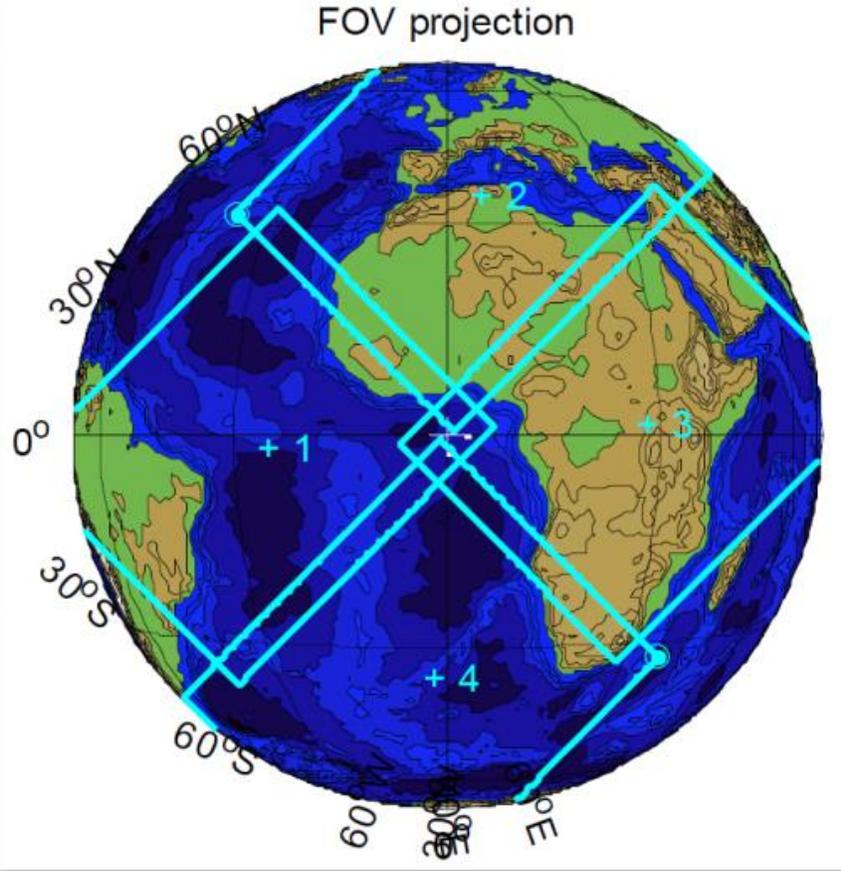

**Total lightning =  
cloud-to-ground  
+ cloud-to-cloud lightning**

# MTG Lightning imaging mission: LI instrument and detection principle

# MTG: Lightning imaging mission

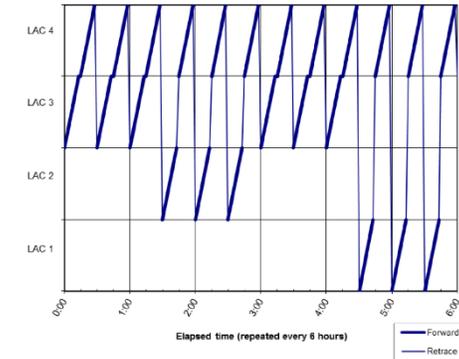

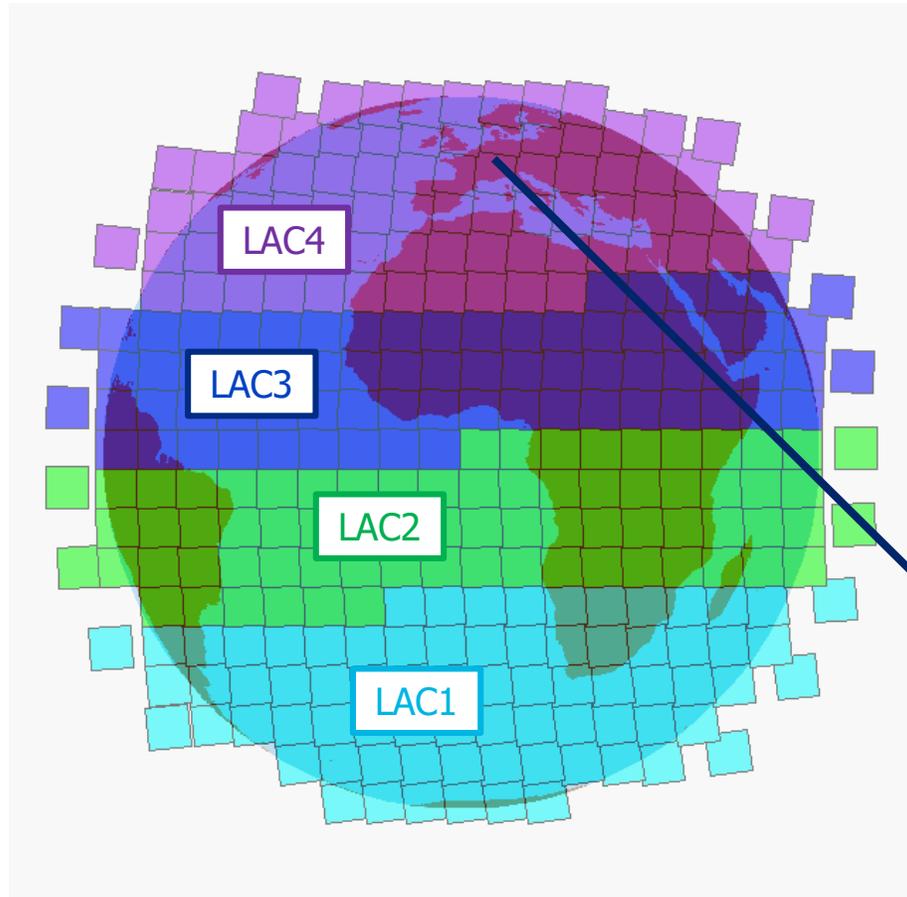

## Flash density in the MTG LI field of view

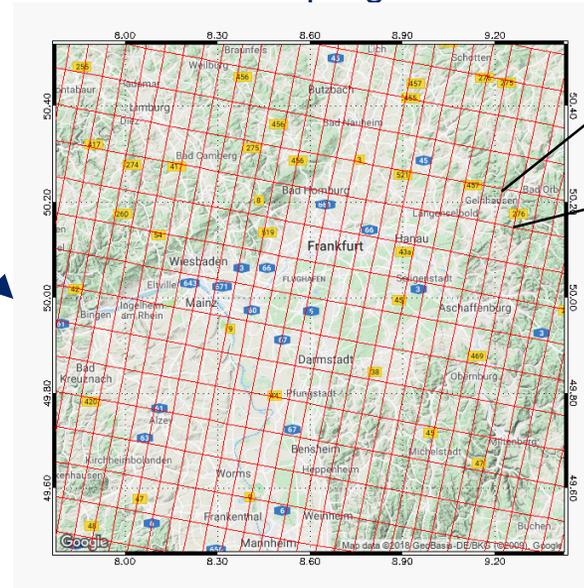

- High flash density over South and SE Europe, and sub-Saharan Africa
- Total lightning can be a precursor of severe weather, with a lead time of tens of minutes
- MTG LI measures total lightning, whereas ground-based networks are mostly sensitive to cloud-to-ground lightning

# MTG Infra-Red Sounder (IRS) scanning sequence

- ✓ The Earth disk is split in 4 Local Area Coverage (LAC) zones, each of them covered in 15 min by a succession of “steps and stares” called dwells
- ✓ LAC4 (northern mid-latitudes) will be covered every 30 minutes
- ✓ LAC1, 2, 3 will be alternatively viewed in-between

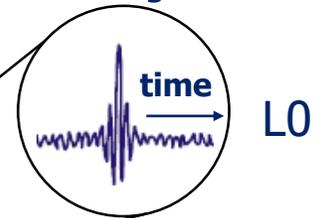

Each dwell consists of 160x160 pixels yielding a high spatial sampling

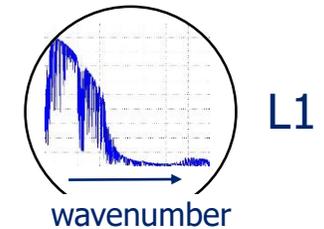

Interferogram

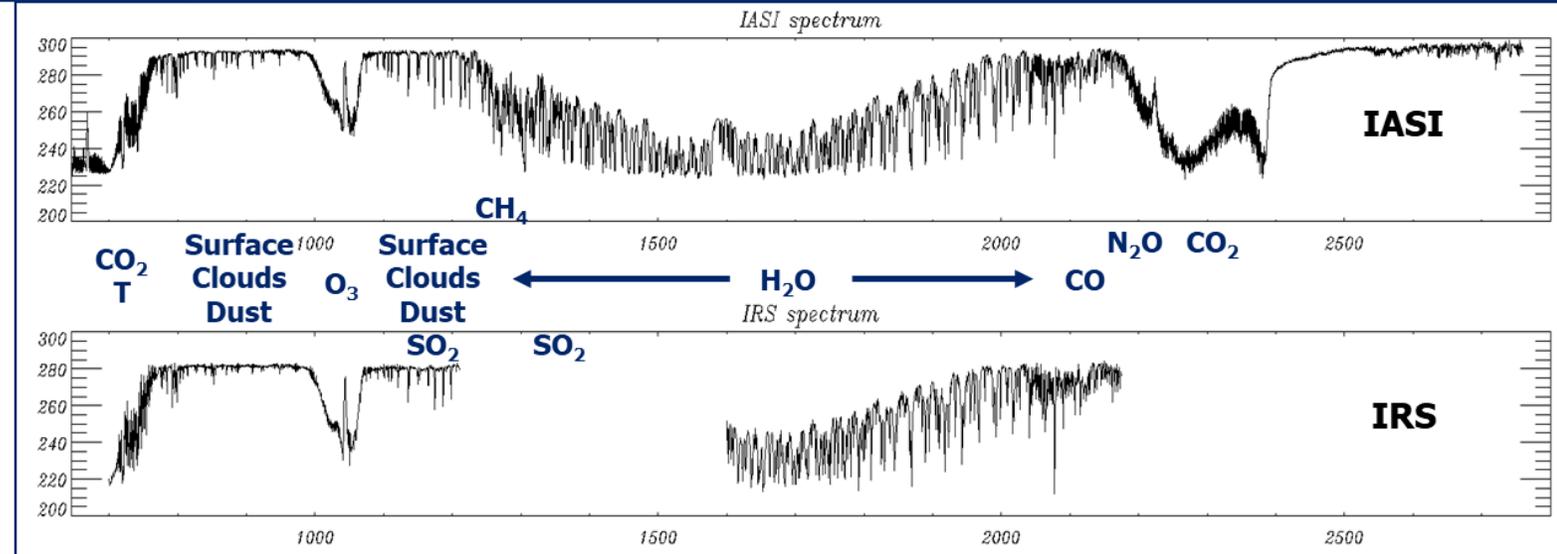

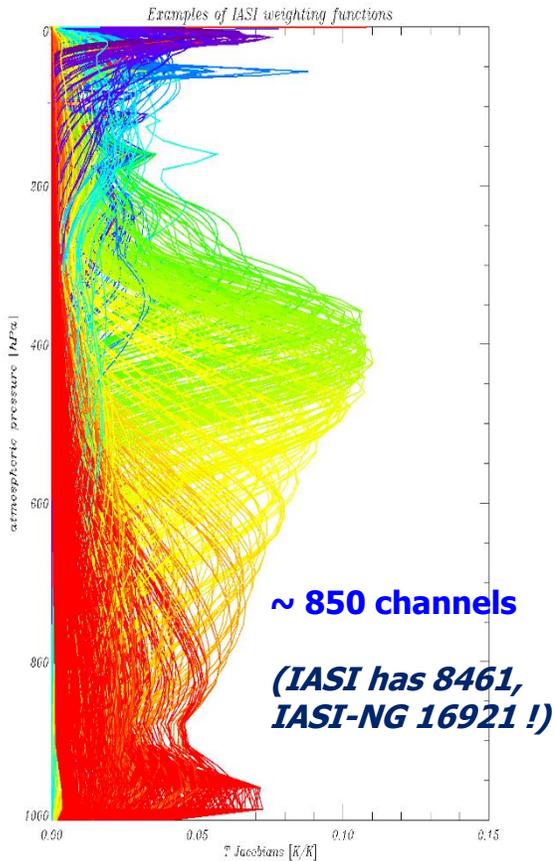

Single spatial sample

Spectrum

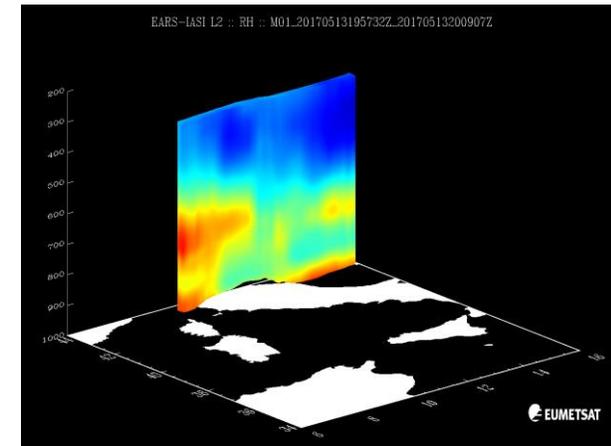

# MTG Infra-Red Sounder (IRS)

**Operational spectro-imagery at high spectral, spatial & temporal resolution:**

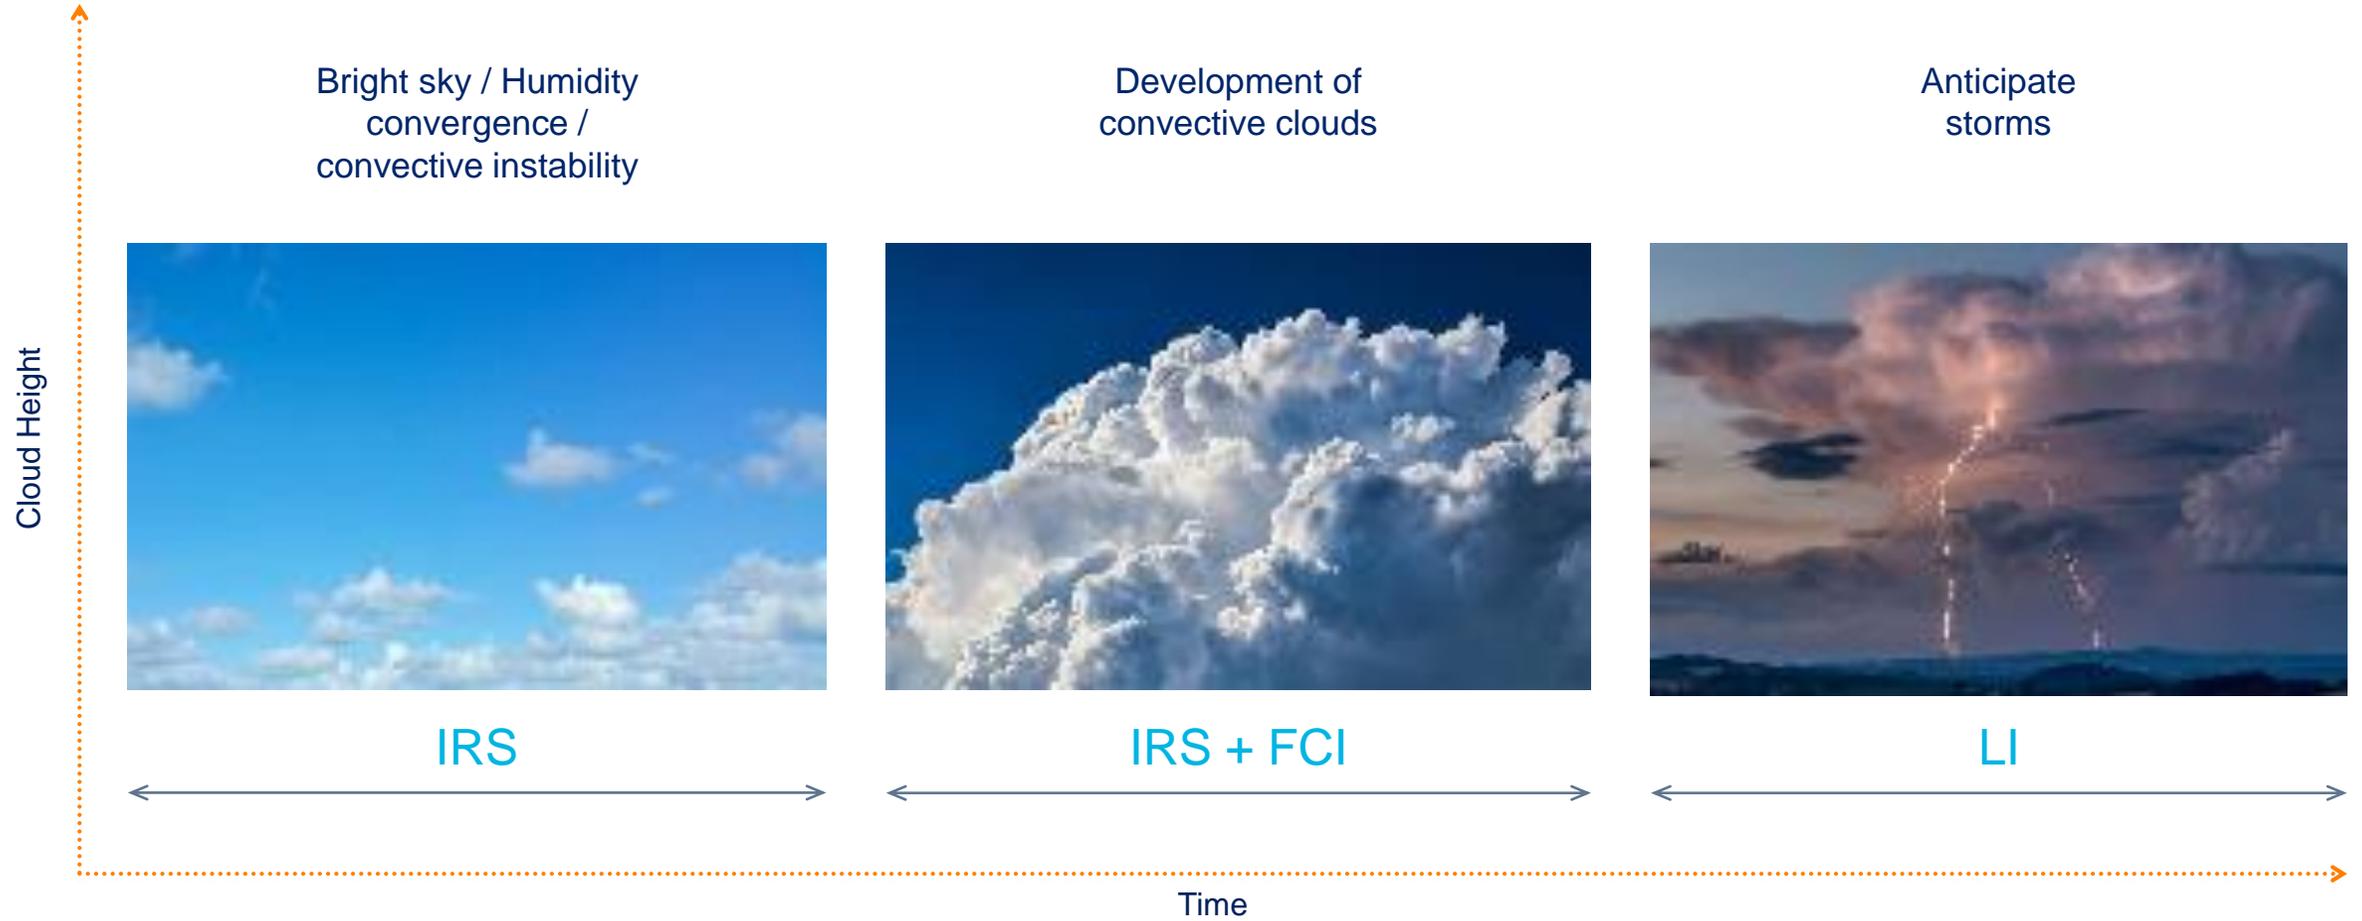

**Two spectral bands: MWIR: 1600 to 2250 cm<sup>-1</sup> (4.44–6.25 μm) and LWIR: 680 to 1210 cm<sup>-1</sup> (8.26–14.70 μm)**

**Sampling: 0.6cm<sup>-1</sup> spectral, 4km at nadir spatial, 30min temporal over Europe and parts of North Africa**

**For Nowcasting and NWP**

# MTG – Contribution to predicting high-impact weather

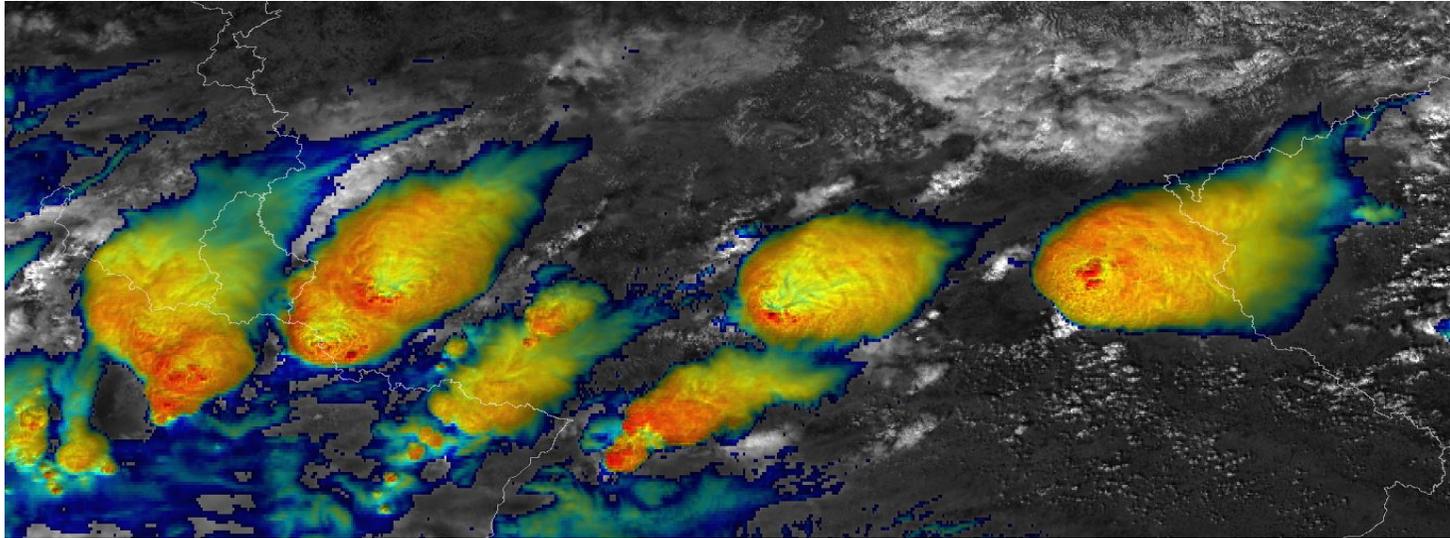

# Application scenarios for MTG data

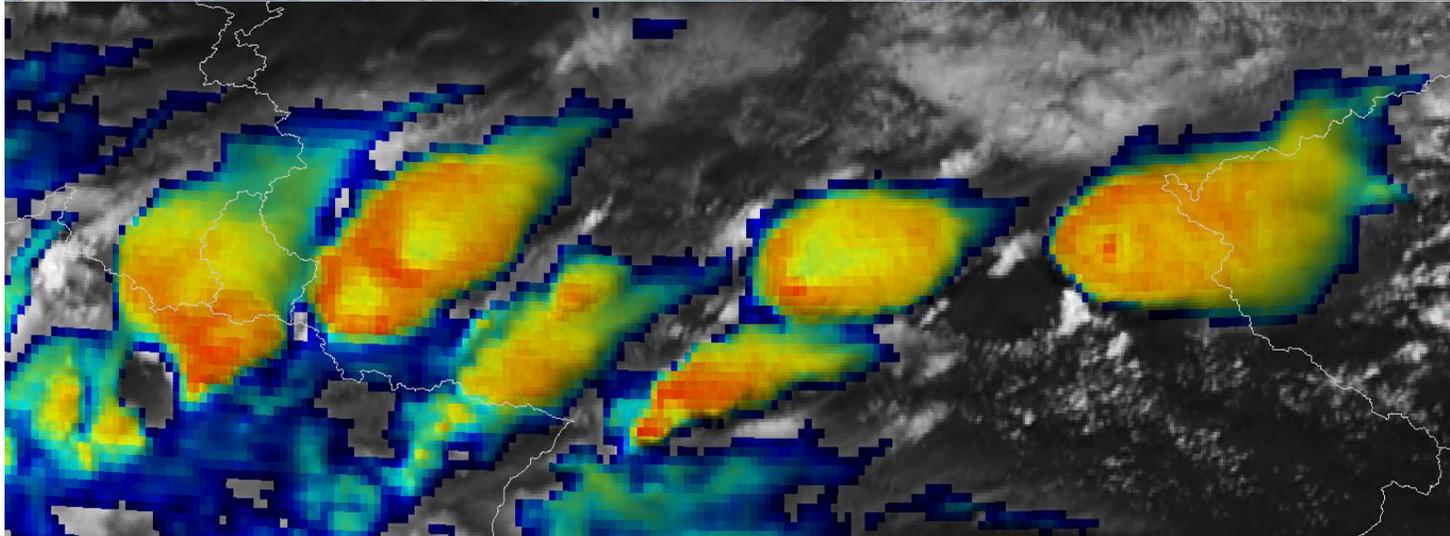

Monitoring and nowcasting severe convective storms

# MTG Spectral imaging mission (FCI): New insights into convective storms through higher spatial resolution

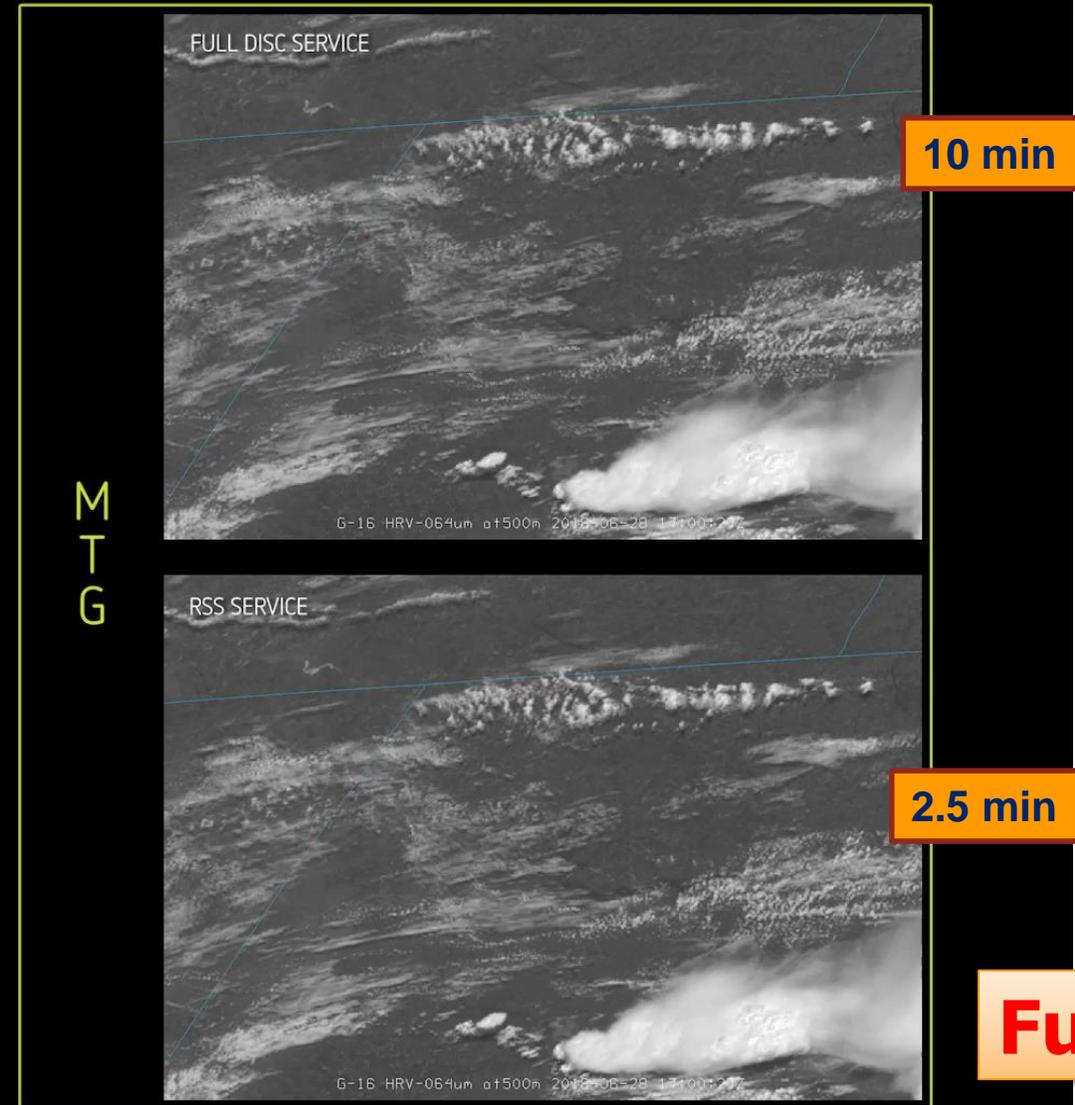

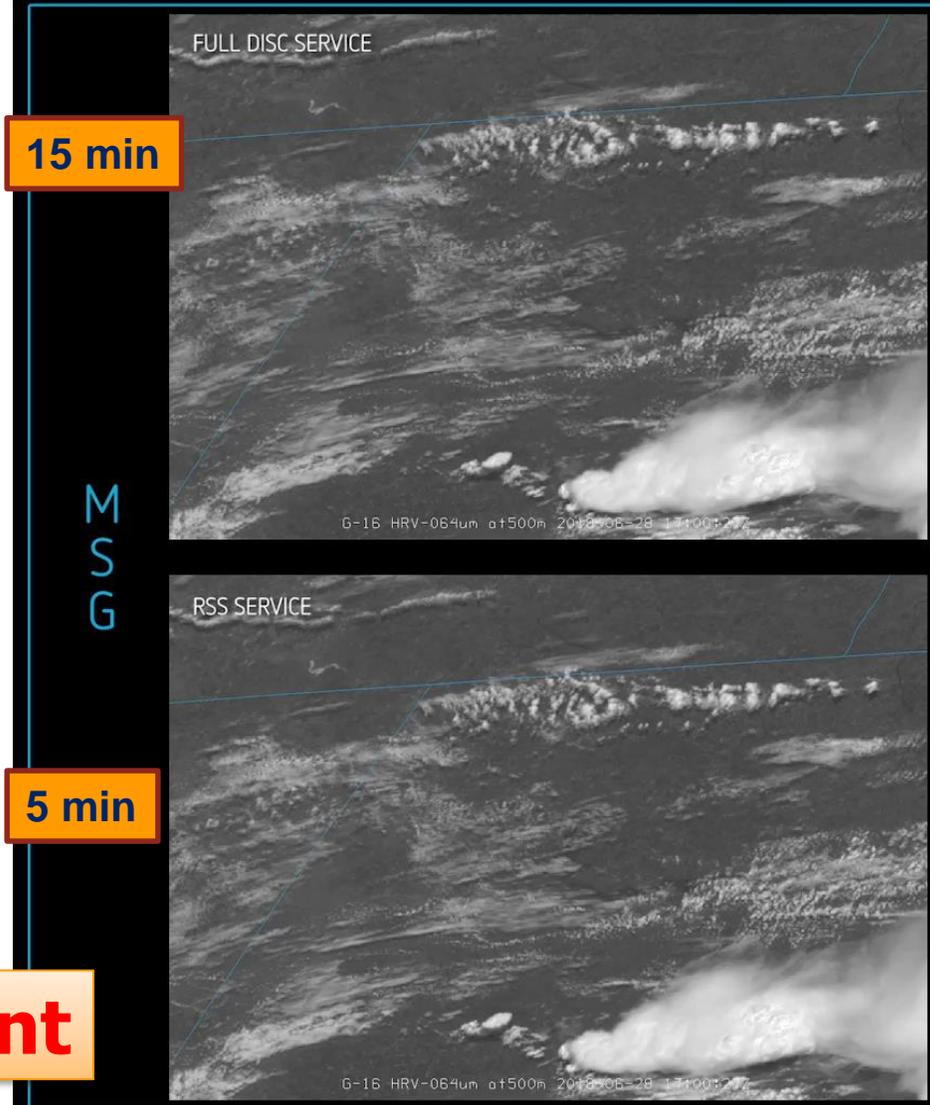

**Future**

**Current**

# MTG Spectral imaging mission (FCI): New insights into convective storms through higher temporal resolution

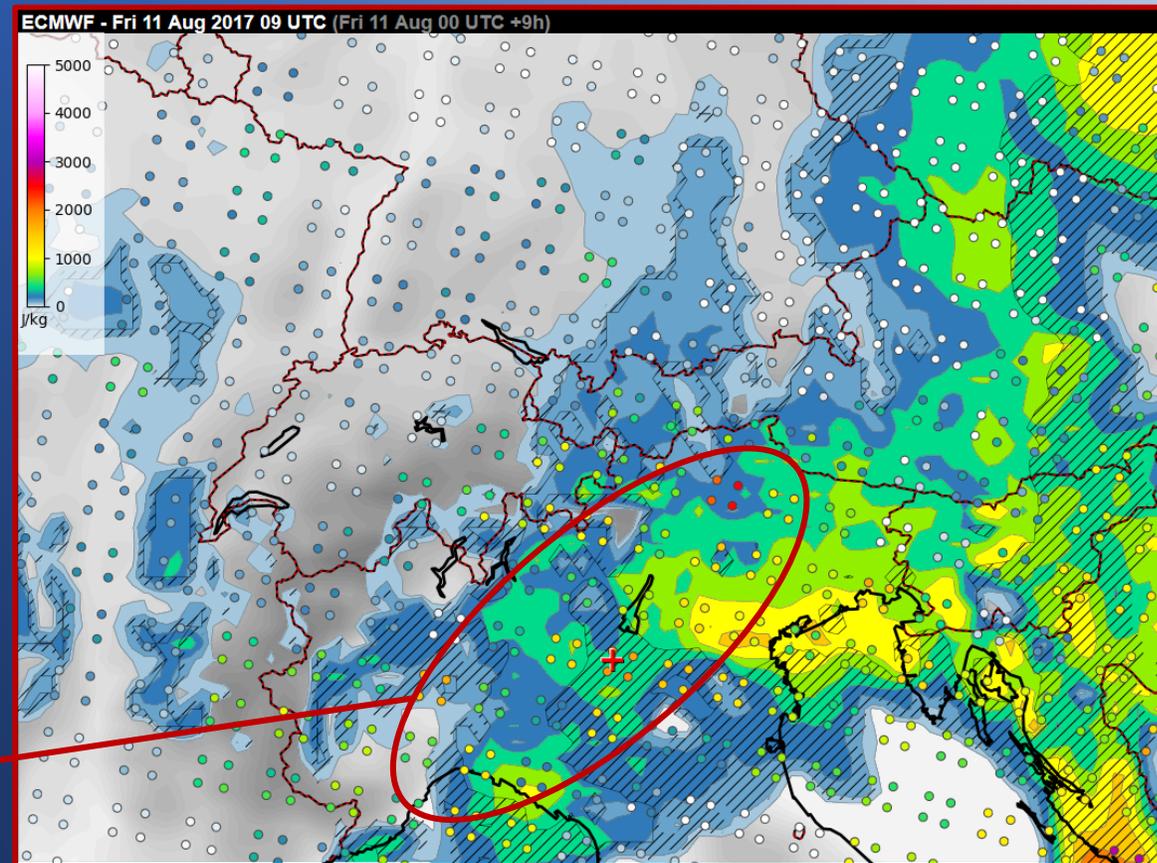

**Current**

**Future**

# Application scenarios for MTG data

Detecting convective initiation, a precursor of potentially severe storms

# Use of Infrared Sounders in forecasting convection

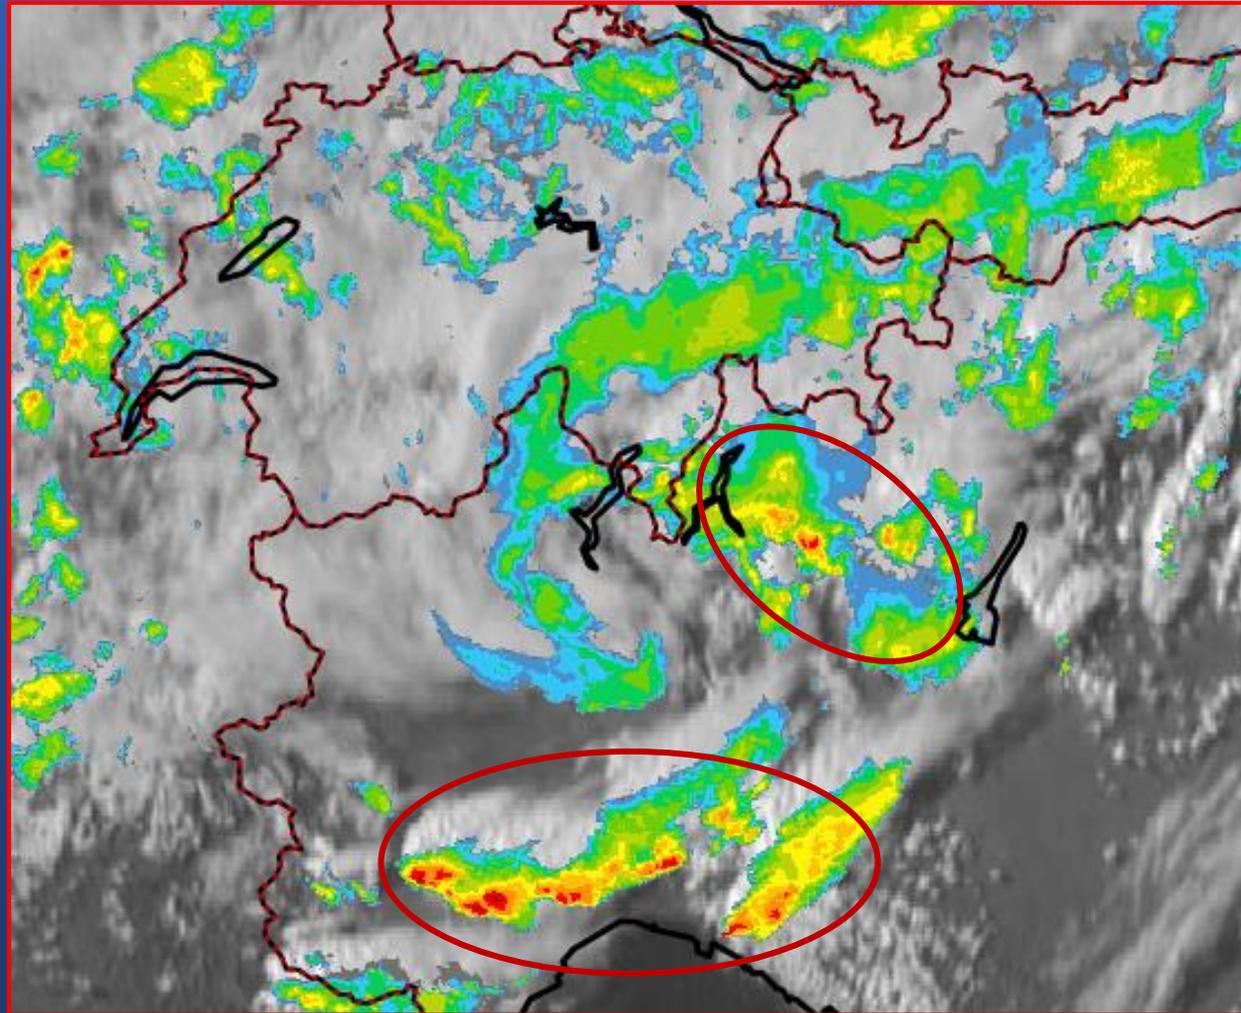

area with higher CAPE according to IASI than in the ECMWF model

background: values derived from +9 h model forecast (ECMWF IFS). Dots indicate IASI-derived values

# Use of Infrared Sounders in forecasting convection

widespread convective  
storm development by

# Application scenarios for MTG data

Fog detection for transport safety

# MTG Spectral imaging mission (FCI): higher spatial resolution imagery

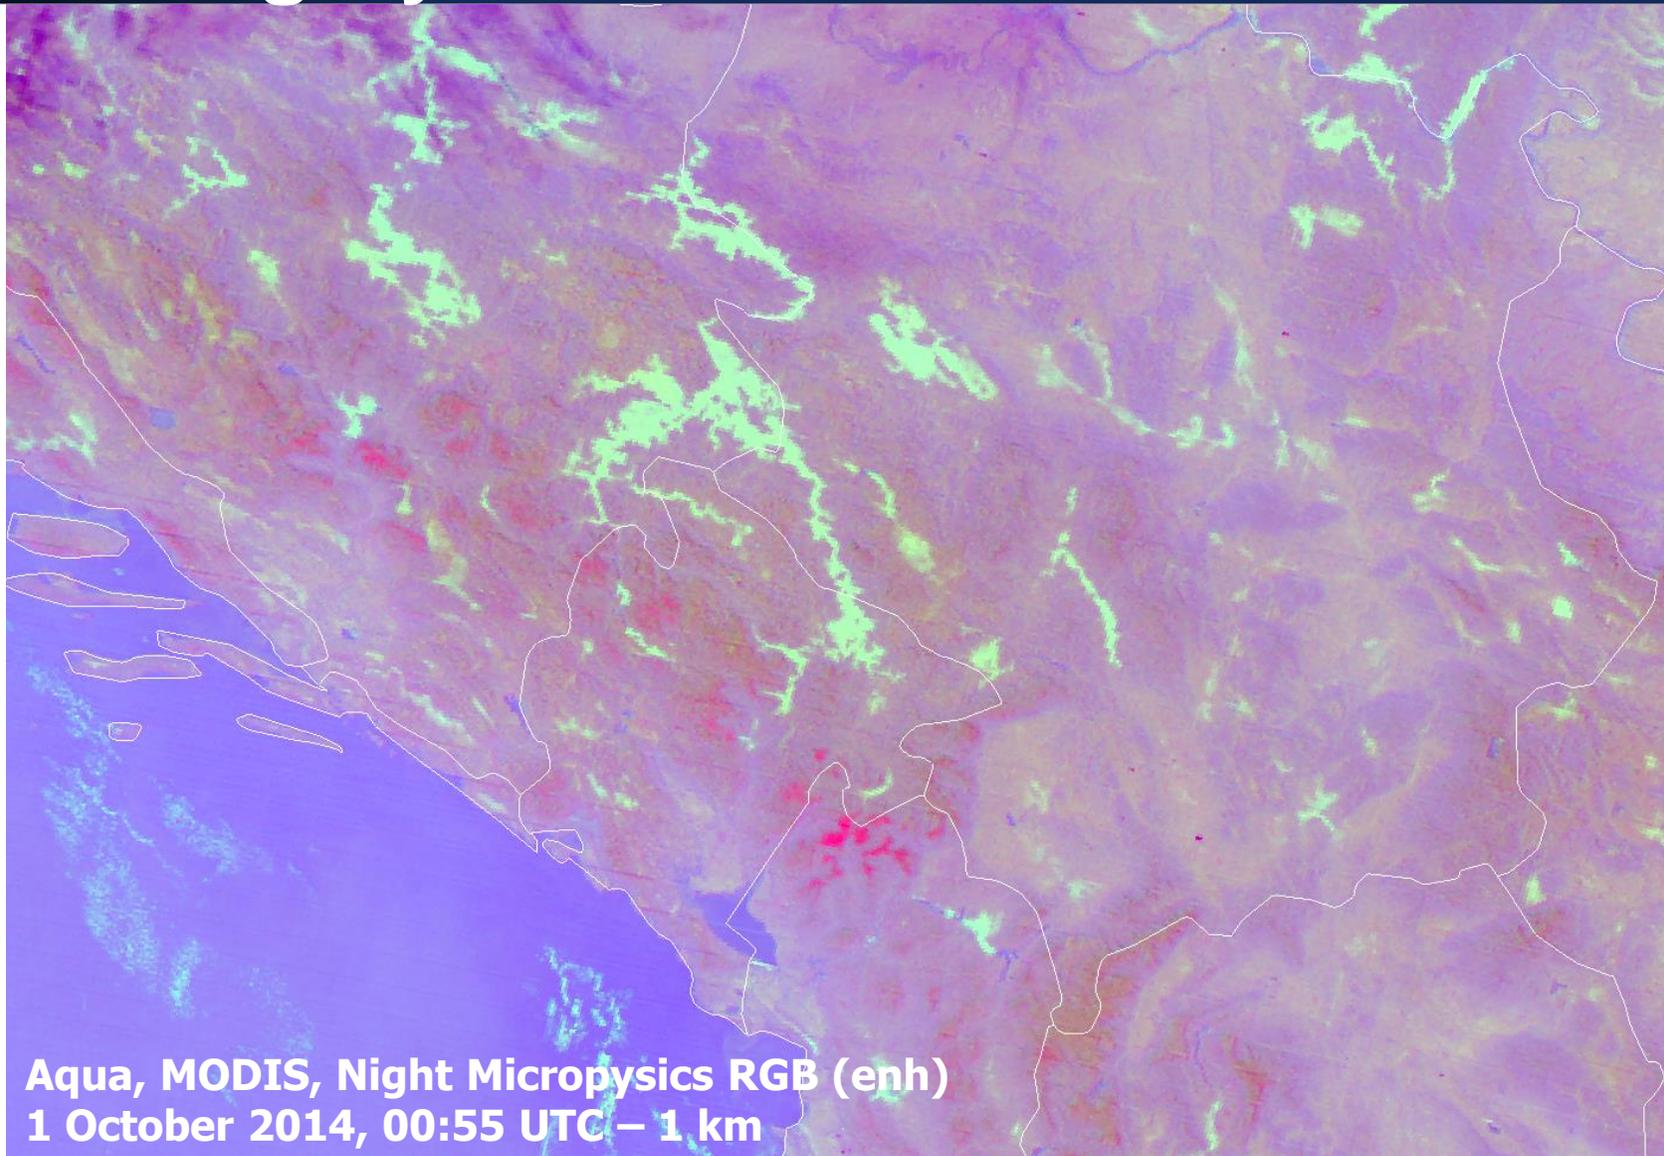

Fog detection over Western Balkans

Current

# MTG Spectral imaging mission (FCI): higher spatial resolution imagery

Fog detection over  
Western Balkans

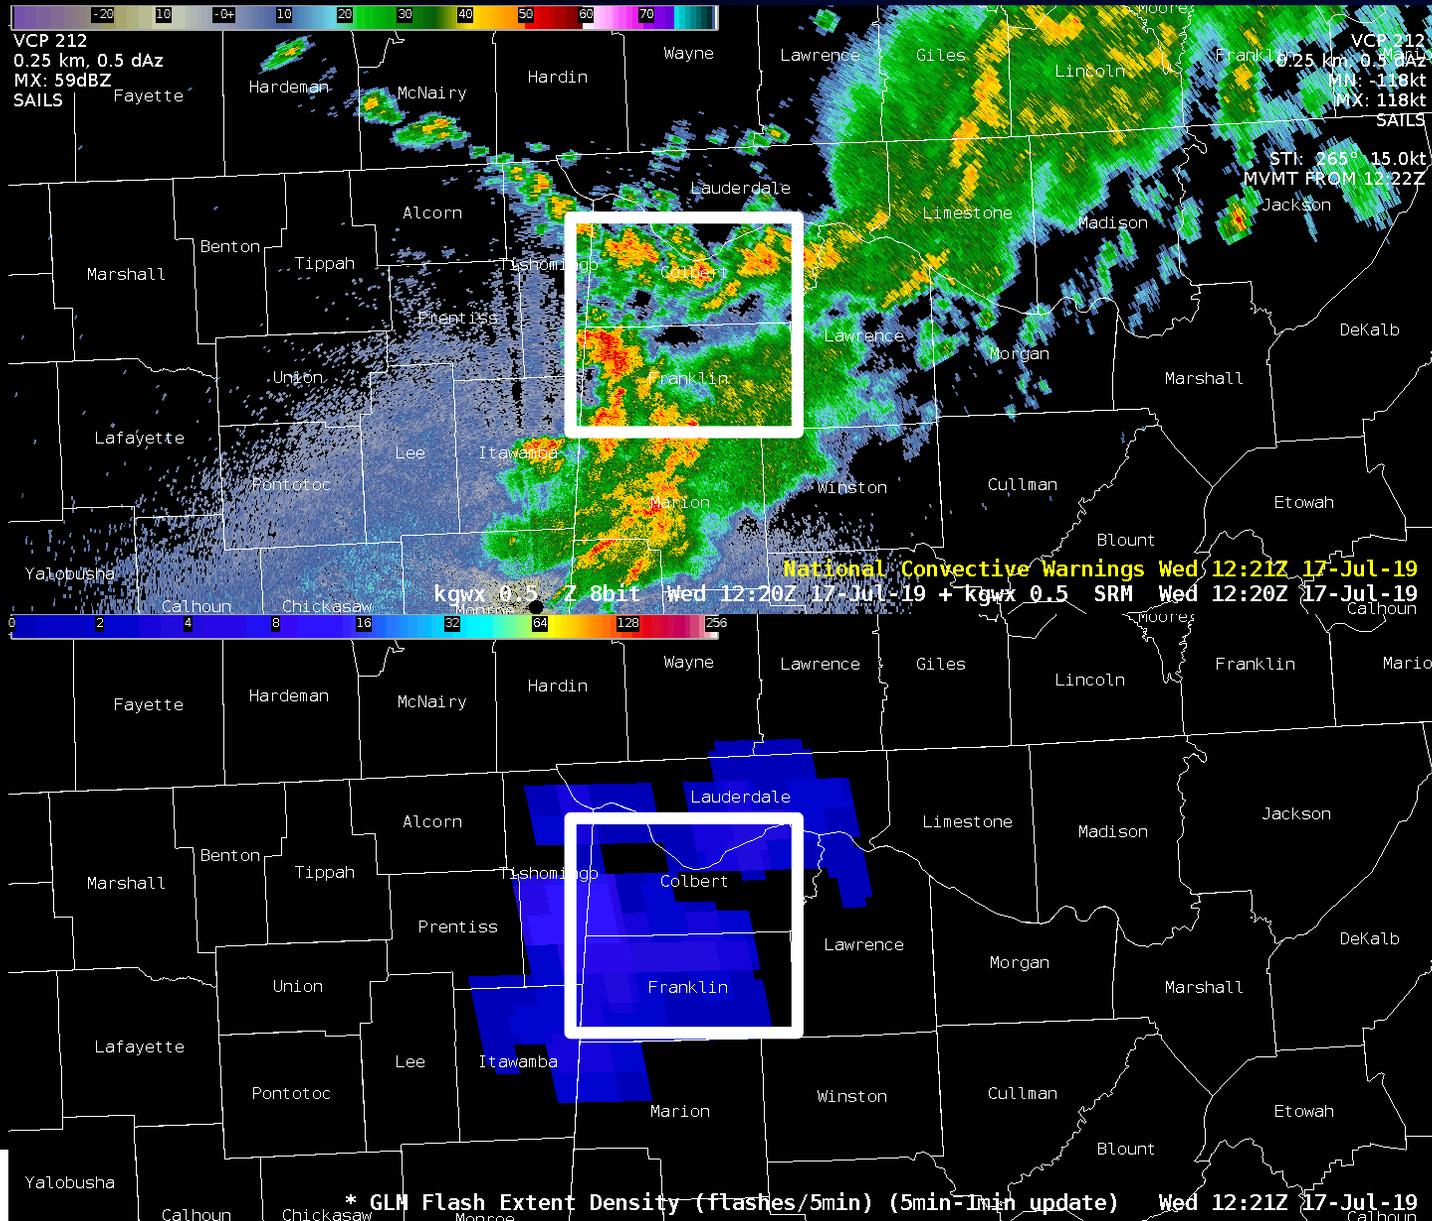

**Future**

# Application scenarios for MTG data

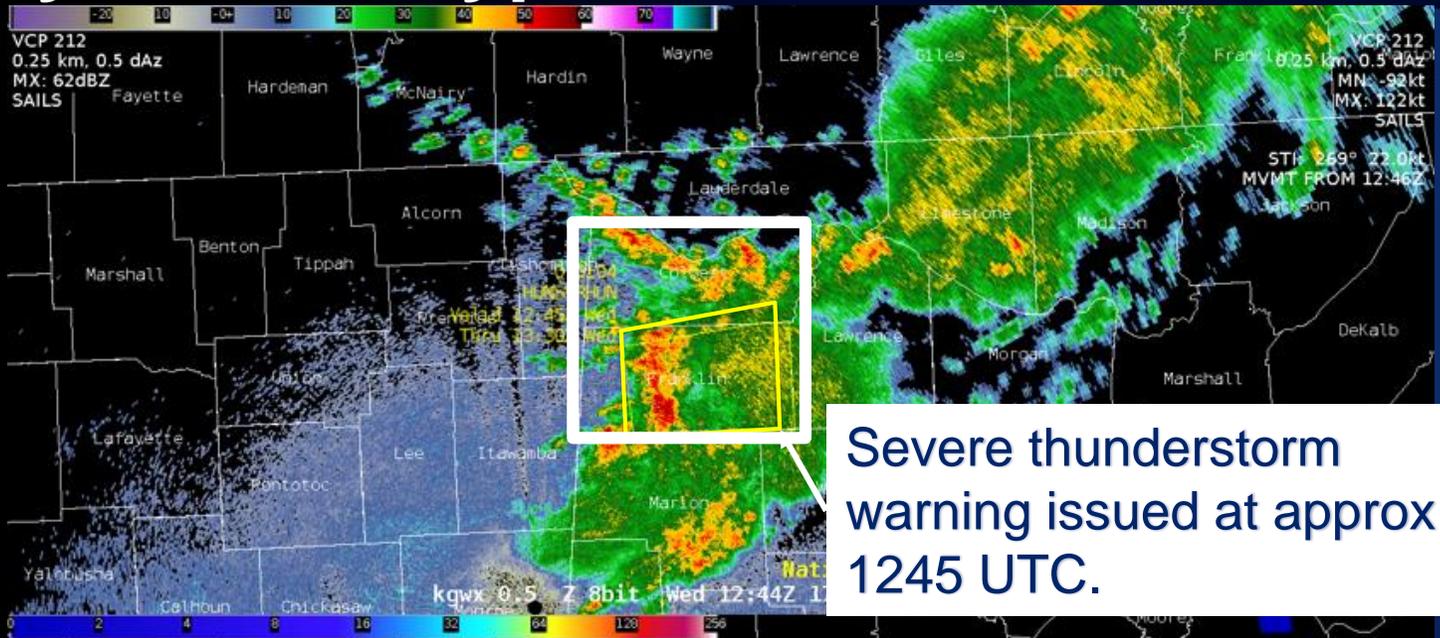

Lightning monitoring for storm tracking over oceans

# Example from Kris White (U.S. National Weather Service) - 17 July 2019: A typical Summertime Thunderstorm Event

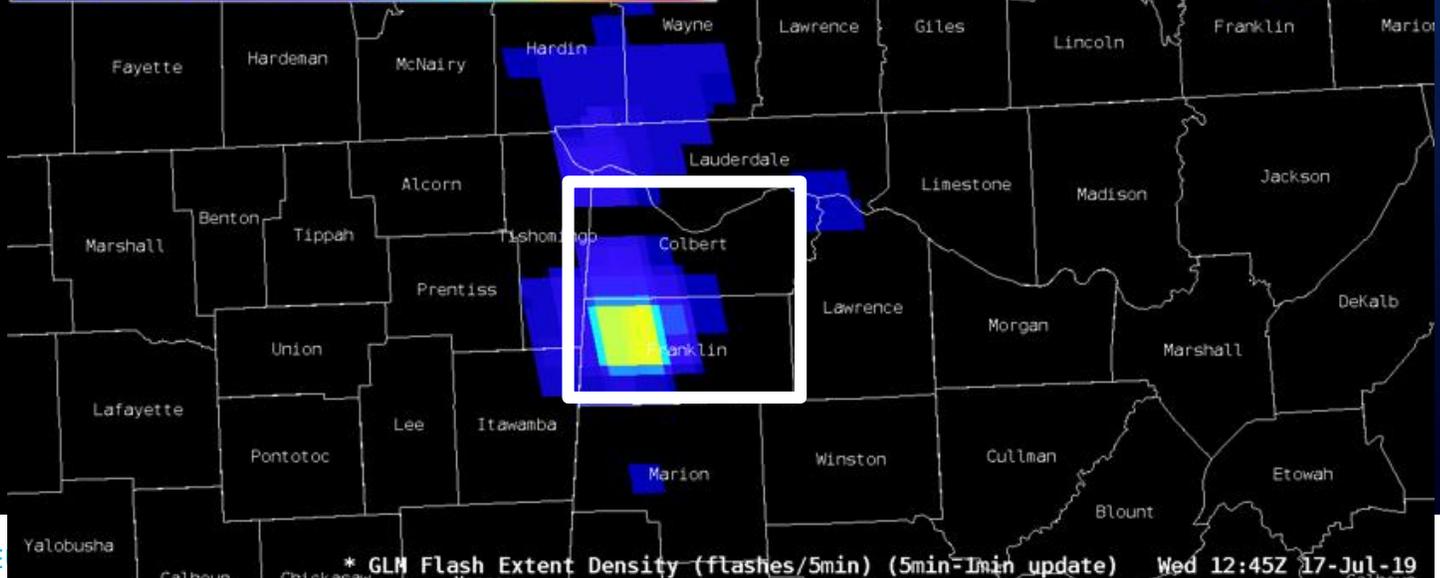

GLM Flash Extent Density product (FED)

# Example from Kris White (U.S. National Weather Service) - 17 July 2019: A typical Summertime Thunderstorm Event

## Chris White / NWS-Alabama:

- Watching for jumps or increases in GLM to provide focus for strongest updraft
- GLM can provide evidence that a storm, which is considered “near severe”, may be about to produce severe weather, tipping the scales in favor of issuing a warning.
- **But GLM alone is not sufficient to determine thunderstorm severity**
- **It can provide higher confidence in warning decisions when lightning products match trends from other observational platforms**

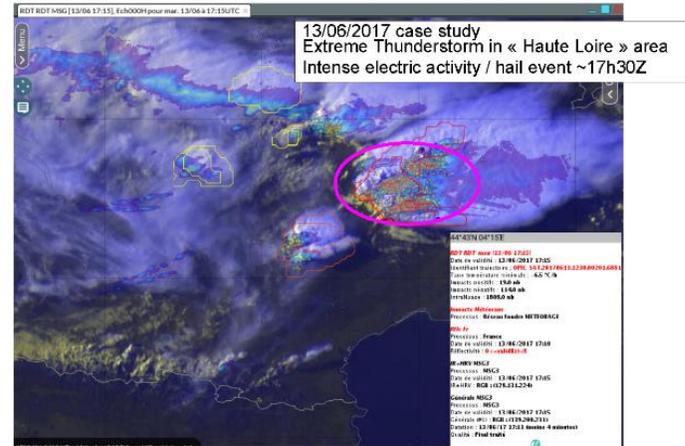

# RDT Lightning Jump (LJ)

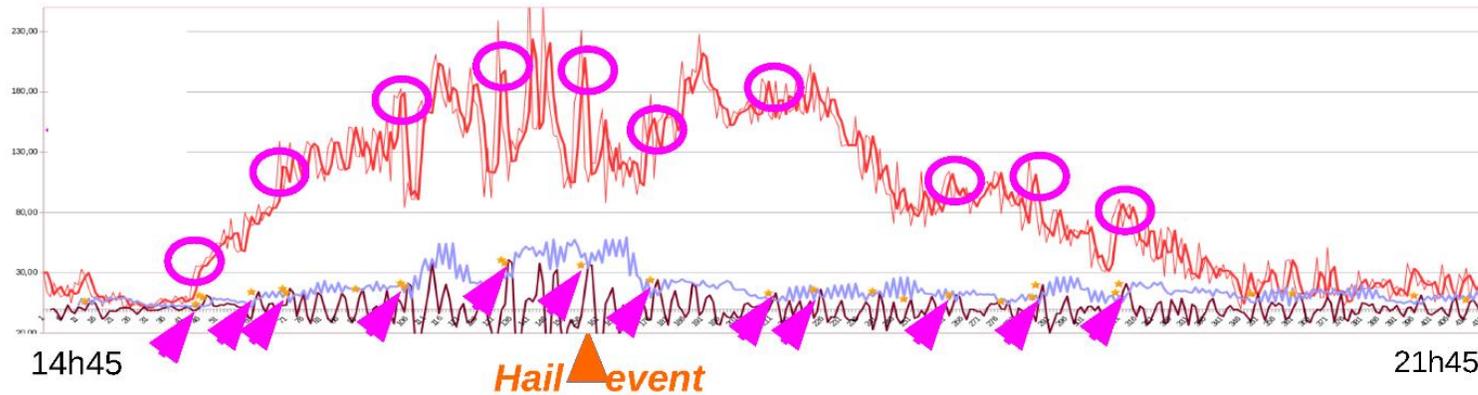

## ✓ Total Lightning rate analysis

- Need input data at **fine time-scale** (*second*).
- 1st step: pairing lightning data with RDT cell
- **Jump** if
  - × **Condition 1**: *Lightning rate*  $> 10 \text{ min}^{-1}$
  - × **Condition 2**: **Acceleration** of *Lightning rate*: *Lightning rate trend*  $> 2 \times \text{rms}$  (*rms computed during previous 12 minutes*)

## ✓ Implementation **RDT v2018**

**RDT:**  
**Rapidly Developing Thunderstorm**  
**Product of NWCSAF Software**

Air quality monitoring

# Copernicus Sentinel-4 on MTG-S: Monitoring air pollution

- Air quality monitoring and management is an important part of environmental regulation.
- The monitoring of **air pollutants such as nitrogen dioxide (NO<sub>2</sub>), sulphur dioxide (SO<sub>2</sub>), ozone, formaldehyde, and fine particles** is of increasing societal importance.
- The Copernicus Sentinel-4 Ultraviolet, Visible and Near-infrared Sounder (UVN) instrument will provide hourly information on tropospheric NO<sub>2</sub>, and many other air quality parameters over **Europe and North Africa**, at a sampling distance of 8 km.

# MTG: Data Access and Processing

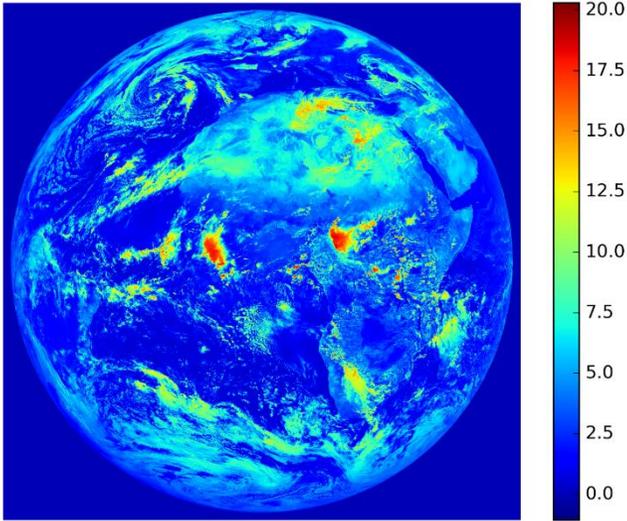

Data Rate Evolution (MSG and MTG)

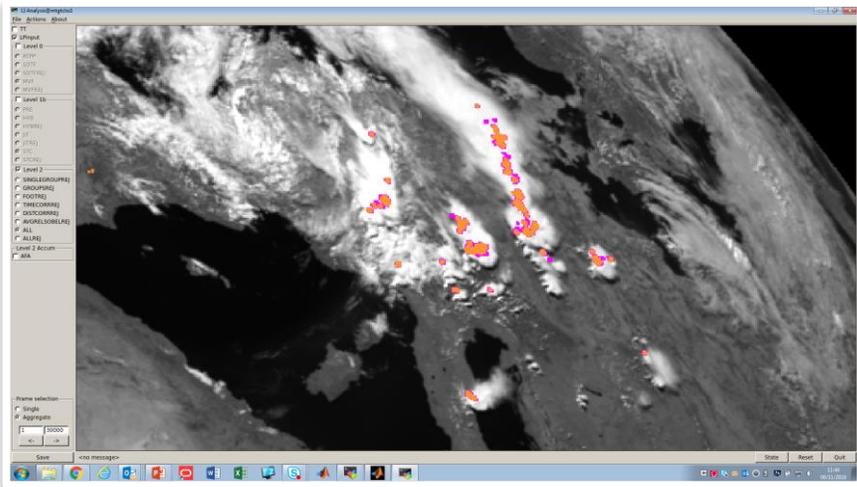

Evolution of data rates from current MSG to the full MTG operations.

# MTG: User Familiarisation Data

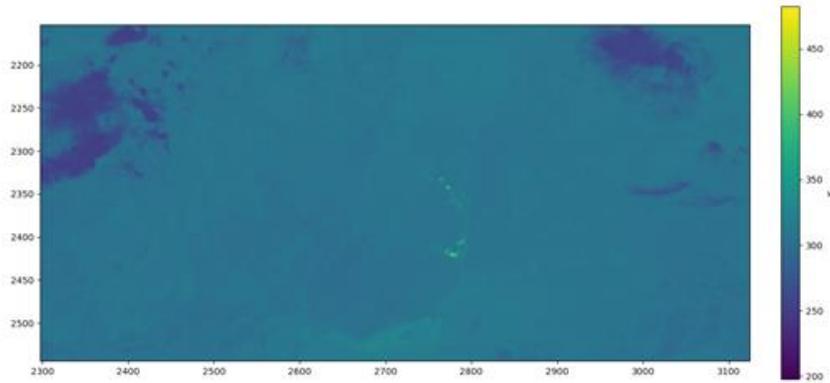

Example of simulated FCI L1c user familiarisation data (VIS 0.6um channel, 10 April 2017). To reduce data volumes in near-real-time services such as EUMETCast, the netCDF-4 near-real-time FCI Level 1c data will only be available in compressed form using the CharLS algorithm.

Simulated LI L2 detected transients which correspond to the occurrence of optical pulses and lightning in the atmosphere (20 June 2013 SEVIRI data used as background)

- To ensure user readiness, it is extremely important that users have access to data that will, in a best possible way, resemble the data that will be available from the future instruments.
- User familiarisation (test) data should have the best possible maturity in data content and in format specifications attached to different data. This is valid both for the pre-launch development period and during post-launch commissioning activities
- Up to now, the following simulated data are made available by EUMETSAT:
  - FCI Level 1c data for format familiarisation (24h)
  - FCI Level 1c data for scientific familiarisation (1 full-disc)
  - IRS Level 1b data for format familiarisation
  - LI Level 2 data for format familiarisation
- <https://www.eumetsat.int/mtg-test-data>

# How EUMETSAT can help

## User Support

- The EUMETSAT User Service Helpdesk can answer your questions regarding MTG. Contact our team at [ops@eumetsat.int](mailto:ops@eumetsat.int)

## Training

- Building on years of experience in training operational meteorologists, the EUMETSAT training programme has started to focus on MTG applications. There will be a range of opportunities for staff of NMHS to engage.
- [https://twitter.com/eumetsat\\_users](https://twitter.com/eumetsat_users) or contact [ops@eumetsat.int](mailto:ops@eumetsat.int)

# User Preparation Webinar Series

- In 2020-2021, online technical briefings on all next-generation (MTG and EPS-SG) Observation Missions and key Applications

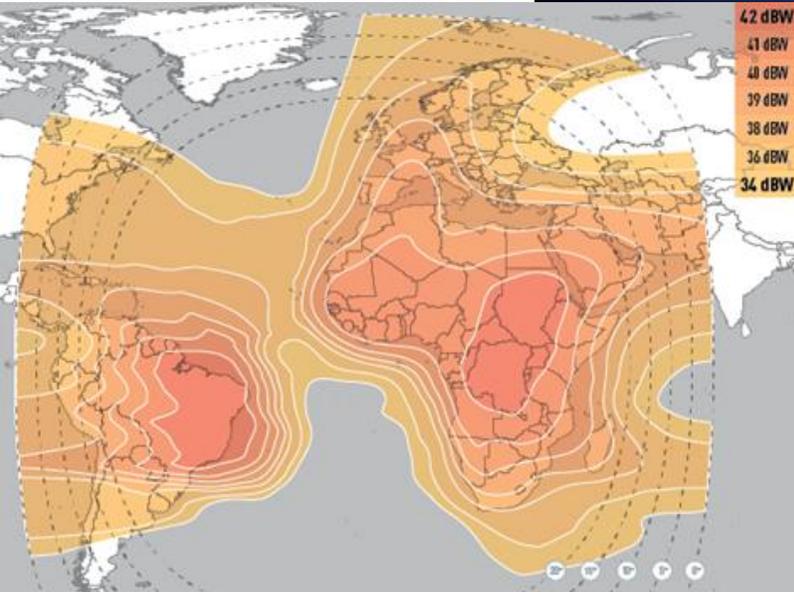

Observation Mission	Webinar Dates
IRS and IASI-NG	13-14 Oct 2020
LI	16-17 Feb 2021
SCA	20 May 2021
FCI and METimage	8-10 Jun 2021
3MI	14-15 Jun 2021

Thank you for your attention.

# EUMETCast Satellite

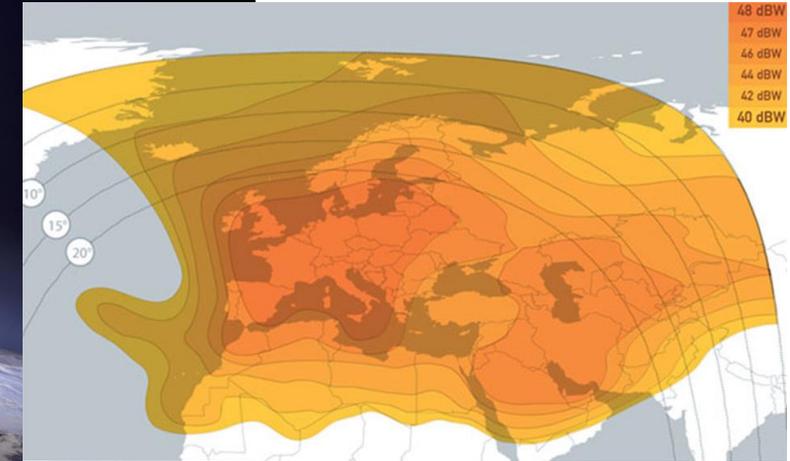

## Africa footprint

## EUMETCAST SYSTEM OVERVIEW

## Europe footprint

# EUMETCast Satellite

## Africa

- Currently partial transponder used, 14 Mbps
- Moderate increase foreseen ~3.5 Mbps for MTG full disc mission

## Europe

### Until end 2022:

- Currently 2 full transponder used, max 140 Mbps, supporting MTG-I1

### From Q4 2022:

- Significant capacity increases foreseen for EPS-SG, MTG-S / I2
- Backup Satellite usage foreseen
